NASEMSO Request for discussion on workforce data

Andy Gienapp, Deputy Executive Director, NASEMSO is requesting a meeting to discuss the potential for use of data from the Coordinated Database as part of NASEMSO's Workforce Measurement project. The project has entered a phase in which the pilot states (AK, MD, MS, IN, VT) are beginning to report on state licensing system data, which will continue throughout the remainder of the project, and will become increasingly more complex. Gaining a complete understanding of the workforce in all the states will require comparison of multiple datasets to include the Coordinated Database maintained by the ICEMSPP. This initial meeting should be exploratory in nature to bring out any concerns the Commission has related to participation in the project and identifying how Coordinated Database data can best inform the project.
